Can you change the font on android. How to change the font size on my android phone. How to change text message font size on android phone. How to change font size on facebook for android phone. How do i change font size on android phone. How to change text font size on android phone. How to change the font size on an android.

By Mike Benson i Hemera Technologies/AbleStock.com/Getty Images The default font size on a computer is based on a multiplier of your monitor's screen resolution. While the preset font size is designed to appeal to a majority of users, for some users, the default font size is too large or too small for comfortable reading. However, you can increase or decrease the size of the fonts on your computer to make it more comfortable to read. Click the "Start" button. Type "Text" in the Search box and press the "Enter" key. This opens a Text properties window. This window contains three size options for fonts on your screen. Click in the radio button next to "Medium" or "Larger" to increase the font size; click in the radio button next to "Smaller" to decrease the font size. Click the "Apply" button to save your change. This displays a confirmation dialog to apply the change. Press the "F10" keyboard key. This displays a menu bar at the top of the screen. Click "View," then move your mouse over "Text Size." This populates a submenu containing several size options. Click to choose "Large" or "Larger" to magnify the size of font on visited sites; click "Smaller" or "Smallest" to decrease font size. The change takes effect immediately. While you can zoom in on an email with finger gestures without adjusting the text size setting on your iPhone, iPad, or iPod touch, you'll need to zoom in on every app to increase the text size. However, you can change the size of text across every app at once using the slider in the Settings app. If you prefer a smaller text size that fits more content in a small screen, such as on an iPhone versus an iPad, move the slider to make the text size smaller. Instructions in this article apply to devices running at least iOS 10, but may also work with older versions of iOS. The examples show an iPhone running iOS 12. Dynamic Type is the name of the iOS feature that adjusts the text size. Adjusting the size of the text isn't universal on an iOS device. Apps that support Dynamic Type take advantage of the customizable text sizes. Text in apps that don't support Dynamic Type will remain unchanged. Later versions of Apple apps support Dynamic Type, including Mail, Notes, Messages, and Calendar. Accessibility settings can be used to further increase the font size and contrast. To use the Text Size option to adjust the font size on an iOS device: Open the Settings app. Go to Display & Brightness > Text Size. On versions of iOS older than iOS 11, go to General. Drag the slider right to increase the text size, or left to decrease the text size. The sample text changes as you adjust the text size. On iOS 11 or newer, add the Text Size shortcut to Control Center for quicker access. If these adjustments didn't make the text large enough, use the Accessibility settings to increase the text size. This adjustment forces even larger text in Mail and other apps that support Dynamic Type and is useful when it's difficult to read the text on a mobile device. Go to Settings > General > Accessibility. Tap Larger Text. Turn on the Larger Accessibility Sizes toggle switch. Drag the slider to the right to make the font larger. Also located from the Accessibility page in the device settings is Zoom. This magnifies the entire screen. Double-tap with three fingers to zoom, and drag three fingers to move around the screen. Bold Text is another setting that makes it easier to read on an iPhone, iPad, or iPod touch. This setting makes Dynamic Type text bold. Enable Increase Contrast to make other text styling adjustments, and Reduce Transparency to reduce transparency and blurs, both of which can increase legibility. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Computer displays are growing bigger all the time, and that means they display graphics at much higher resolutions than old CRT monitors did. Although you can view more things on screen in higher definition, a larger display also makes everything look smaller, and it may even make text too hard to read. Luckily, you can increase the size of text through software, without having to sacrifice that high-definition resolution. You have a few ways to accomplish this, but here are the easiest methods in several popular Web browsers and operating systems. 1. Click Start. Type Font Size in the search box, and press Enter. 2. In the Display window that appears, choose the Medium font size (125 percent of the default size) or the Larger font size (150 percent of the default size). If you don't like those settings, you can fine-tune the text size to your liking by selecting the Set custom text size (DPI) option. Use the Display control panel in Windows to adjust the appearance of text. 3. Click the Apply button. Windows will warn that the changes will not go into effect until you log off and then log back in to the system. Click Log Off Now to apply your changes. 1. In OS X version 10.7 or later, open the Apple menu and select System Preferences. 2. In the System Preferences menu, select Universal Access. 3. Under the Seeing tab, locate the Zoom section and select On to enable zoom. 4. Hold down Command-Alt on your keyboard, and then tap the plus-sign (+) key to make the screen view larger, or tap the minus-sign/hyphen (-) key to make the screen view smaller. You can continue pressing either of these two keys until you reach a comfortable zoom level. 1. Update to the latest version of the Google Chrome browser. Next, click the wrench icon in the upper-right corner of the Chrome window, and select Options. 2. In the navigation page, select Under the Hood. 3. In the Web Content section, click the Font Size drop-down menu. You can choose between multiple sizes of text ranging from Very Small to Very Large, and the changes will take effect immediately. 1. Update to the latest version of Firefox. Open a browser window, and then press the Alt key to bring up the File menu. Select Zoom Text Only from the Firefox Zoom menu. 2. Click the View menu, then Zoom, then Zoom Text Only. 3. Hold down the Ctrl key on your keyboard, and then press the plus (+) key to make on-screen text larger or the minus/hyphen (-) key to make on-screen text smaller. You can continue to press either of the two keys to adjust the text size to your liking. 1. Open an Internet Explorer window and select the Gear icon in the upper-right corner. From there, select Zoom. 2. In the Zoom menu, choose a predefined zoom size (the default is 100 percent) ranging from 50 percent to 400 percent. If you'd prefer to fine-tune the size yourself, you can click the Custom option and specify your own percentage. Choose a size from the list, or specify your own. Remember, for optimal browsing and posture, adjust the size of on-screen text so that it permits you to read comfortably at a distance of 3 to 5 feet. Ben Stockton / How-To Geek Android offers plenty of options to customize the appearance of your device, including your font style. If you want to change your Android font, you can use built-in settings to do it or use a custom launcher. Due to the fragmented nature of Android, changing your fonts on different Android manufacturers and versions will vary. The steps below are confirmed to work on a Samsung device running Android 9 Pie. Changing Built-In Font Settings Some Android devices and versions have built-in settings to allow you to change your font style. If your phone or tablet doesn't have these options, you won't be able to change the font style without rooting your device, which isn't something we recommend. If you do have the option to alter your font settings, head to the "Settings" menu on your Android device by swiping down the notifications shade and tapping the gear icon in the top right. You can also access your "Settings" menu from the app drawer. In the "Settings" menu, scroll down and tap the "Display" option. The "Display" menu may vary depending on your Android device. Tap "Font Size and Style" if you're a Samsung device owner. This may appear as "Font" or another variation on other phones and tablets. In the "Font Size and Style" menu, tap the "Font Style" button. You'll have a list of pre-installed font styles available for you to choose from. "Default" is, as the name suggests, the default font used on your device. Tap on one of the other available fonts to switch to it. The change should happen automatically. Samsung Galaxy device owners are able to install other fonts using the Samsung Galaxy Store. Below the list of pre-installed fonts, tap "Download Fonts" to load the Samsung Galaxy Store. From there, download one of the available font options by tapping the download button next to it. Once your new font style is installed, return to the "Font Style" menu and tap on it to switch. Using a Custom Launcher If you don't have the option to change your font style on your Android device, you can use a custom launcher instead. Two popular launchers you could choose to use are Nova Launcher and Action Launcher. Both of these launchers will display custom fonts for you, but these will only be displayed within the launcher itself. That means the font you see elsewhere in your Android settings and in other apps will remain as the Android default. RELATED: How To Personalize Your Android Phone With Themes and Launchers Changing Fonts in Nova Launcher With over 50 million downloads, Nova Launcher is one of the most-used custom Android launchers. If you have it installed, you can customize the font style being used for app icons on the home screen, in the app drawer, and for any app folders. To start, swipe up from your home screen to access the Nova Launcher app drawer. Then tap the "Nova Settings" app. If you want to change the font being used with icons on your home screen, tap Home Screen > Icon Layout. App drawer fonts can be changed by tapping App Drawer > Icon Layout. Follow the same process for app folders by tapping Folders > Icon Layout. The "Icon Layout" menu will be slightly different for each of these three options, but the font style section remains the same. Under the "Label" option, you'll see a "Font" setting. Tap on this to select between one of four options: Normal, Medium, Condensed, and Light. Once you've made your selection, tap the back button and check the icons in your app drawer or home screen to confirm the font style has changed. Changing Fonts in Action Launcher If you're using Action Launcher and you want to customize the font style used in your app drawer and home screen, swipe up to enter your launcher app drawer and then tap the "Action Settings" app. In the Action Launcher Settings menu, tap the "Appearance" option. Scroll down within the "Appearance" menu and then tap "Font." Choose one of the custom Action Launcher fonts available within the "Font" menu. Tap on one of the options to confirm your choice and then select the back button to return to your app drawer. The font being used within the app drawer and on your home screen will change to match your chosen font choice. Other Third-Party Font Style Apps A number of font style apps are available on the Google Play Store. These apps aren't generally recommended as most won't be able to make any changes to the default font style your device uses. Some, like Stylish Text, will let you write "stylish text" in messaging apps like WhatsApp that give the impression you're using a different font. These apps use custom symbols to display stylized text rather than actually making any changes to your font style. Other apps, like Stylish Fonts, use the same process that allows users to install fonts using the Samsung Galaxy Store. If you have a Samsung device, it's recommended you use the built-in "Download Fonts" method listed above instead.
